FLOOD EVACUATION PLAN BEFORE, DURING AND AFTER

Nobody can stop a flood. But if you are faced with one, there are actions you can take to protect your family and keep your property losses to a minimum. The most important thing is to make sure your family is safe.

BEFORE A FLOOD

Your homeowners insurance does not cover flood insurance. Don't wait until a flood is coming to purchase your policy. It normally takes 30 days after purchase for a flood insurance policy to go into effect.

➤ **Have disaster supplies on hand.**

- Flashlights and extra batteries.
- Portable, battery-operated radio (and extra batteries) tuned to a local station, and follow emergency instructions.
- First aid kit and manual.
- Emergency food and bottled water.
- Non-electric can opener.
- Essential medicines.
- Cash and credit cards.
- Sturdy shoes.

➤ **Plan and practice an evacuation route.**

- Learn flood-warning signs and your community's alert signals.
- Your emergency plan should include information on the safest routes to shelters.
- Individuals living in Flash Flood areas should have several alternative routes.

➤ **Develop an emergency communication plan.**

- In case family members are separated from one another during floods or flashfloods (a real possibility when adults are at work) have a plan for getting back together. Ask an out-of-state relative or friend to serve as the "family contact". After a disaster, it's often easier to call long distance. Make sure everyone in the family knows the name, address, and phone number of the contact person.
- Make sure that all family members know how to respond after a flood or flash flood.
- Teach all family members how and when to turn off gas, electricity, and water.
- Teach children how and when to call 9-1-1 for police or fire department, and which radio station to tune to for emergency information.
- Be prepared to evacuate.
- Move valuables, such as papers, jewelry, and clothing to upper floors or higher elevations.
- Fill bathtubs, sinks, and plastic soda bottles with clean water. Sanitize the sinks and tubs first by using bleach. Rinse, and then fill with clean water.
- Bring in any outdoor possessions, such as lawn furniture, plants, etc., or tie them down securely.

FLOOD EVACUATION PLAN

➤ **Once the flood arrives:**

- Don't drive through a flooded area. If you come upon a flooded road, turn around and go another way. More people drown in their cars than anywhere else.
- If your car stalls, abandon it immediately and climb to higher ground. Many deaths have resulted from attempts to move stalled vehicles.
- Don't walk through flooded areas. As little as six inches of moving water can knock you off your feet.
- Stay away from downed power lines and electrical wires. Electrocutation is another major source of deaths in floods. Electric current passes easily through water.
- Look out for animals, especially snakes. Animals lose their homes in floods too. They seek shelter in your home.
- If the waters start to rise inside your home before you have evacuated, retreat to the next floor, and if necessary, the roof.
- Take dry clothing, a flashlight and a portable radio with you. Then, wait for help.
- Don't try to swim to safety; wait for rescuers to come to you.
- If outdoors, climb to high ground and stay there.

➤ **After the flood:**

Flood dangers do not end when the water begins to recede. Listen to a radio or television and don't return home until authorities indicate it is safe to do so.

Remember to help your neighbors who may require special assistance – infants, elderly people, and people with disabilities.

- If your home has suffered damage, call the insurance company or agent who handles your flood insurance policy right away to file a claim.
- Before entering a building, inspect foundations for cracks or other damage. Don't go in if there is any chance of the building collapsing.
- Upon entering the building, DON'T use matches, cigarette lighters or any other open flames, since gas may be trapped inside. Instead, use a flashlight to light your way.
- Keep power off until an electrician has inspected your system for safety.
- Floodwaters pick up sewage and chemicals from roads and other areas. If your home has been flooded, protect your family's health by cleaning up your house right away. Throw out foods and medicines that may have met floodwater.
- Until local authorities proclaim your water supply to be safe, boil water for drinking and food preparation vigorously for five minutes before using.
- Be careful walking around. After a flood, steps and floors are often slippery with mud and covered debris, including nails and broken glass.

FLOOD EVACUATION PLAN

➤ Inspecting utilities in a damaged home:

- Check for gas leaks – If you smell gas or hear blowing or hissing noise, open a window and quickly leave the building.
- Look for electrical system damage – If you see sparks or broken or frayed wires, or if you smell hot insulation, turn off the electricity at the main fuse box or circuit breaker. If you have to step in water to get to the fuse box or circuit breaker, call an electrician for advice.
- Check for sewage and water line damage – If you suspect sewage lines are damaged, avoid using the toilets and call a plumber. If water pipes are damaged, contact the water company and avoid the water from the tap. You can obtain safe water by melting ice cubes.
